Dear Hiring Manager,

The most successful digital products share one key quality: they transform complex ideas into intuitive experiences that users can navigate effortlessly. As a **UI/UX and Product Designer**, I specialize in translating business and technical requirements into **user-centered, scalable product experiences** that drive adoption, engagement, and measurable impact.

I bring **4 years of experience in product and UX design**, working across SaaS, EdTech, fintech, e-commerce, and enterprise platforms. My expertise spans the **end-to-end product design lifecycle**, including **user research, product discovery, information architecture, user flows, wireframing, prototyping, high-fidelity UI design, and developer handoff**. I focus on delivering solutions grounded in **usability, accessibility, and data-driven design decisions**, while collaborating effectively with **cross-functional teams of product managers, engineers, and stakeholders**.

At **Morgen Green Limited**, I currently design SaaS and education platforms, contributing to **product strategy, research insights, and design system development**. My role involves transforming complex product requirements into clear, responsive interfaces while ensuring seamless collaboration with engineering teams. With working knowledge of **HTML and CSS**, I am able to bridge the gap between design and development, ensuring **implementation-ready interfaces and efficient developer handoffs**.

Previously, I have delivered impactful design solutions for startups and growing companies, improving product usability, reducing user friction, and aligning design decisions with broader **business and product goals**. It allows me to apply **structured problem-solving, analytical thinking, and strong stakeholder communication** when tackling complex product challenges. I thrive in environments where **collaboration, iteration, and continuous product improvement** are key to building meaningful user experiences.

You can view my portfolio using this link: [Click here to view my portfolio](#)

I would welcome the opportunity to contribute my **product design, UX strategy, and user-centered thinking** to your team and help create digital products that users genuinely enjoy and rely on.

Thank you for your time and consideration.

Sincerely,

Alex Oluwaseun Akinjiola

UI/UX & Product Designer
